PROPOSAL
SITE PLAN

The adjacent plan shows the proposed landscape layout for the site. The design creates a new green public realm to the north of the site which also serves as the key pedestrian route through the site to the other existing buildings.

A second option has been indicated if the parking is relocated to Collinson Street creating a shorter distance from the BB bays to accessible units as well as creating further opportunity for greening and play.

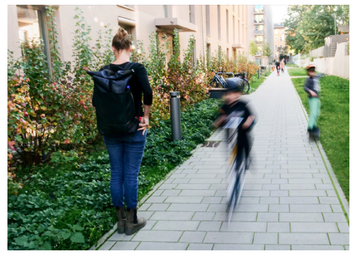

Key features:

- 4m footway offset on Southwark Bridge Road
- Community garden reprovided (64m2)
- Key pedestrian route to the north of the development
- 2m retained access route for pedestrians
- Tree lined street to the north of development with opportunity for low level planting and play on the way.
- Extensive green roof on main building
